

Ball Mills

Ball Mills

Lime Systems have a wide range of roller mounted ball mills to suit a variety of grinding applications and a variety of grinding media. Tonnes of more than 20TPH dry feed per train (Depending on feed material characteristics) are achievable. Fully automated control, lubrication and flushing systems allow for maximum flexibility and reliability.

Lime System's Ball Mills are furnished with high quality, locally sourced and readily available components from reputable OEM's as standard. Our designs are fully customisable to suit the client's needs factoring in site conditions, required grind and production rates. The mill feed components have been developed to minimise blockages and each Ball Mill has a specially designed sealing and feed arrangement to reduce maintenance downtime and increase availability.

Lime Systems have produced many large and small Ball Mills for use throughout the world, from Turkey and PNG to locally in Western Australia. Lime Systems also provides routine check-up and [maintenance services](#) on site.

Lime Systems offers high-quality Ball Mills for grinding applications in various industries. These Ball Mills are designed to handle a range of materials, including limestone, slag, fly ash, and cement, among others. With a focus on performance and reliability, Lime Systems Ball Mills are manufactured to meet the strictest quality standards, ensuring optimal efficiency and long-term durability.

Featuring advanced technology and innovative design, Lime Systems' Ball Mills are available in various sizes and configurations to suit different grinding requirements. Whether you need a small lab-scale ball mill for testing or a large industrial ball mill for high-capacity grinding, Lime Systems has got you covered. With extensive experience and expertise in bulk storage solutions, Lime Systems is the go-to partner for all your Ball Mill needs. Contact Lime Systems today to discuss how our Ball Mills can improve your grinding operations and enhance your productivity.
