

# Dust Collectors

## Silo Bin Vent Filters

The Lime Systems – Bulk Storage Solutions Silo Bin Vent Filters are purpose designed to suit most applications for [Bulk Storage Silo](#) filtration. Our range of 3, 12 & 18 bag models are designed in response to industry demand, fulfilling client's requirements in a broad spectrum of applications.

Our Silo Bin Vent Filters are mounted to the top of silos, negating the need for an additional maintenance platform. Robust in construction and powder coated to withstand demanding working conditions, the Lime Systems Silo Vent Filter has proven itself over the years globally.

The dust separated by the Lime Systems Silo Bin Vent Filter is returned back to the silo via a reverse pulse jet cleaning system regulated by an integrated controller. A variety of additional features can be added such as pressure differential automatic cleaning, and various inputs to suit your needs.

Lime Systems offers a range of Silo Bin Vent Filters (Dust Collectors) that are designed to effectively control dust emissions and improve air quality in your plant. Our Silo Bin Vent Filters are designed to handle a wide range of materials, including powders, granules, and flakes, making them ideal for use in diverse industries such as mining, cement, and food processing. We offer customizable options to match the specific requirements of your plant, including different filter media and sizes.

Our Silo Bin Vent Filters are engineered for maximum efficiency and reliability, with high-quality materials and construction that ensures optimal performance. We use advanced technologies and features such as pulse-jet cleaning, integrated fans, and weather hoods to ensure that the filters operate at peak efficiency, even in challenging environments. Additionally, our filters are designed for easy maintenance, with access points and removable parts that make maintenance tasks simpler and more efficient.
