Rotary valves are an essential component in many bulk handling systems, and Lime Systems provides a range of rotary valves that are designed to provide reliable, efficient, and cost-effective performance. Lime Systems rotary valves are made from high-quality materials, including stainless steel, and are available in a range of sizes and configurations to meet specific customer requirements. These valves are used in a range of applications, including material feeding and discharging, as well as dust collection systems.

Lime Systems rotary valves are designed with advanced features, including variable speed drives and high-capacity inlets and outlets, which ensure smooth and efficient operation. The valves are designed to handle a range of bulk materials, including powders, granules, and pellets, and can be configured for use in high-temperature applications. Lime Systems rotary valves are easy to install and maintain and come with a range of options, including airlocks, explosion-proof designs, and various sealing options. Whether you need a valve for a new system or to replace an existing one, Lime Systems can provide a custom solution that meets your specific needs.
